Profile

Economist with three years inside corporate finance — treasury, billing and FP&A — building the data the business runs on: Python, SQL and Power BI applied to operations across 15+ countries in the Americas. I now run a production PostgreSQL warehouse in medallion architecture, with dbt transformations, 89 automated quality tests and a Power BI semantic model, refreshed daily with no manual step. I am looking for a remote role where financial judgment and data engineering are paid as one capability, not two halves.

Experience
